Beyond Vectors Hung-yi Lee

Introduction

- Many things can be considered as "vectors".
 - E.g. a function can be regarded as a vector
- We can apply the concept we learned on those "vectors".
 - Linear combination
 - Span
 - Basis
 - Orthogonal
- Reference: Chapter 6

Are they vectors?

Are they vectors?

A matrix

$$A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix} \qquad \boxed{\begin{array}{c} 1 \\ 2 \\ 3 \\ 4 \end{bmatrix}}$$

- A linear transform
- A polynomial

$$p(x) = a_0 + a_1 x + \dots + a_n x^n$$

$$\begin{vmatrix} a_0 \\ a_1 \\ \vdots \\ a_n \end{vmatrix}$$

Any function is a vector?

$$f(t) = e^t \qquad \qquad v = \begin{bmatrix} \vdots \\ ? \\ \vdots \end{bmatrix}$$

$$g(t) = t^2 - 1 \qquad g = \begin{bmatrix} \vdots \\ ? \\ \vdots \end{bmatrix}$$

$$h(t) = e^t + t^2 - 1$$
 $v + g$

What is a vector?

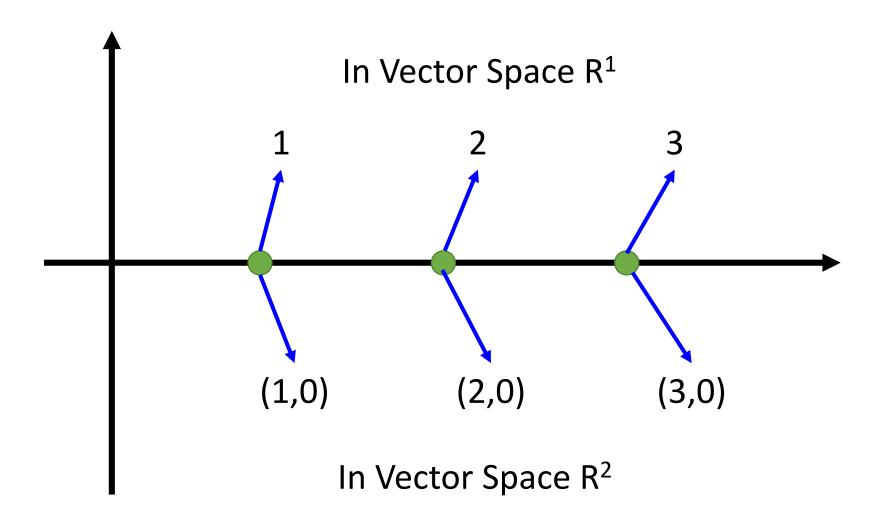

Rⁿ is a vector space

- If a set of objects V is a **vector space**, then the objects are "vectors".
- Vector space:
 - There are operations called "addition" and "scalar multiplication".
 - u, v and w are in V, and a and b are scalars. u+v and au are unique elements of V
- The following axioms hold:
 - u + v = v + u, (u + v) + w = u + (v + w)
 - There is a "zero vector" 0 in V such that u + 0 = u

unique

- There is -u in V such that u +(-u) = 0
- 1u = u, (ab)u = a(bu), a(u+v) = au +av, (a+b)u = au +bu

Objects in Different Vector Spaces

Objects in Different Vector Spaces

All the polynomials with degree less than or equal to 2 as a vector space

$$\begin{bmatrix} 1\\0\\0 \end{bmatrix} \qquad \begin{bmatrix} 1\\1\\1\\0 \end{bmatrix} \qquad \begin{bmatrix} 1\\1\\1\\1 \end{bmatrix}$$

$$f(t) = 1 \qquad g(t) = t+1 \qquad h(t) = t^2+t+1$$

Vectors with infinite dimensions

All functions as a vector space

Subspaces

Review: Subspace

- A vector set V is called a subspace if it has the following three properties:
- 1. The zero vector 0 belongs to V
- 2. If **u** and **w** belong to V, then **u+w** belongs to V

Closed under (vector) addition

• 3. If **u** belongs to V, and c is a scalar, then c**u** belongs to V

Closed under scalar multiplication

Are they subspaces?

- All the functions pass 0 at t₀
- All the matrices whose trace equal to zero
- All the matrices of the form

$$\begin{bmatrix} a & a+b \\ b & 0 \end{bmatrix}$$

- All the continuous functions
- All the polynomials with degree n
- All the polynomials with degree less than or equal to n

P: all polynomials, P_n: all polynomials with degree less than or equal to n

Linear Combination and Span

Linear Combination and Span

Matrices

$$S = \left\{ \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}, \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 \\ 1 & 0 \end{bmatrix} \right\}$$

Linear combination with coefficient a, b, c

$$a \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix} + b \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix} + c \begin{bmatrix} 0 & 0 \\ 1 & 0 \end{bmatrix} = \begin{bmatrix} a & b \\ c & -a \end{bmatrix}$$

What is Span S?

All 2x2 matrices whose trace equal to zero

Linear Combination and Span

Polynomials

$$S = \{1, x, x^2, x^3\}$$

Is $f(x) = 2 + 3x - x^2$ linear combination of the "vectors" in S?

$$f(x) = 2 \cdot 1 + 3 \cdot x + (-1) \cdot x^2$$

$$Span\{1, x, x^2, x^3\} = P_3$$

$$Span\{1, x, \cdots, x^n, \cdots\} = P$$

Linear Transformation

Linear transformation

- A mapping (function) T is called linear if for all "vectors" u, v and scalars c:
- Preserving vector addition:

$$T(u+v) = T(u) + T(v)$$

• Preserving vector multiplication: T(cu) = cT(u)

Is matrix transpose linear?

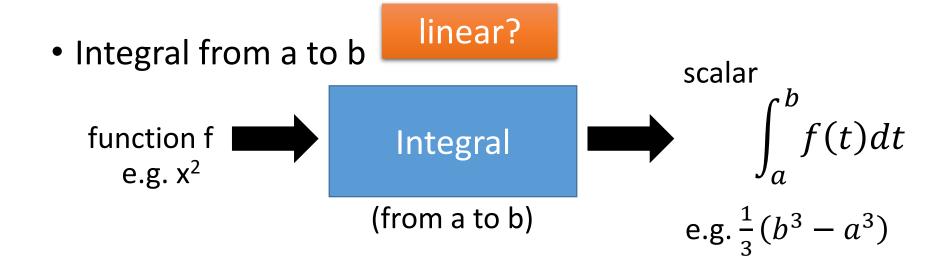

Input: m x n matrices, output: n x m matrices

Linear transformation

e.g. x^2

• Derivative: linear?

function f Derivative function f'

e.g. 2x

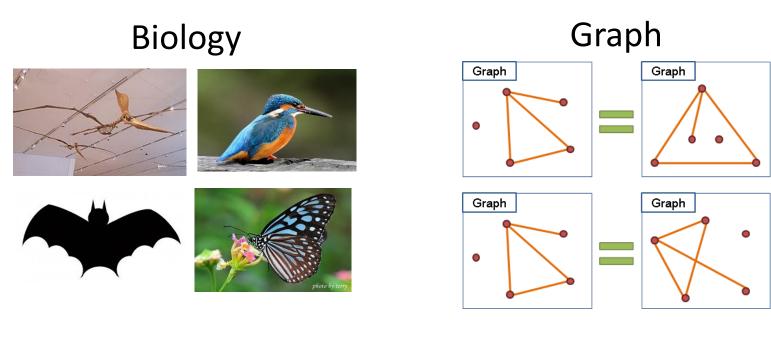

Null Space and Range

- Null Space
 - The null space of T is the set of all vectors such that T(v)=0
 - What is the null space of matrix transpose?
- Range
 - The range of T is the set of all images of T.
 - That is, the set of all vectors T(v) for all v in the domain
 - What is the range of matrix transpose?

One-to-one and Onto

- $U: \mathcal{M}_{m \times n} \to \mathcal{M}_{n \times m}$ defined by $U(A) = A^T$.
 - Is *U* one-to-one? yes
 - Is U onto? yes
- $D: \mathcal{F}_3 \to \mathcal{F}_3$ defined by D(f) = f'
 - Is *D* one-to-one? no
 - Is D onto? no

Isomorphism (同構)

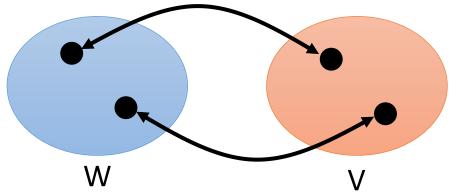

Chemistry

Isomorphism

- Let V and W be vector space.
- A linear transformation T: V→W is called an isomorphism if it is one-to-one and onto
 - Invertible linear transform
 - W and V are isomorphic.

Example 1: $U: \mathcal{M}_{m \times n} \to \mathcal{M}_{n \times m}$ defined by $U(A) = A^T$.

Example 2: $T: \mathcal{F}_2 \to \mathcal{R}^3$

$$T\left(a+bx+\frac{c}{2}x^2\right) = \begin{vmatrix} a\\b\\c \end{vmatrix}$$

Basis

A basis for subspace V is a linearly independent generation set of V.

Independent

Example

$$S = \{x^2 - 3x + 2, 3x^2 - 5x, 2x - 3\}$$
 is a subset of \mathcal{S}_{2}

Is it linearly independent?

$$3(x^2 - 3x + 2) + (-1)(3x^2 - 5x) + 2(2x - 3) = \mathbf{0}$$

No

Example

$$S = \left\{ \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}, \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 \\ 1 & 0 \end{bmatrix} \right\}$$
 is a subset of 2x2 matrices.

Is it linearly independent?

$$a \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix} + b \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix} + c \begin{bmatrix} 0 & 0 \\ 1 & 0 \end{bmatrix}$$

implies that a = b = c = 0

Yes

Independent

If $\{v_1, v_2,, v_k\}$ are L.I., and T is an isomorphism, $\{T(v_1), T(v_2),, T(v_k)\}$ are L.I.

Example

The infinite vector set $\{1, x, x^2, \dots, x^n, \dots\}$

Is it linearly independent?

$$\sum_{i} c_{i} x^{i} = 0$$
 implies $c_{i} = 0$ for all i .

Yes

Example

$$S = \{e^t, e^{2t}, e^{3t}\}$$
 Is it linearly independent?

Yes

$$ae^{t} + be^{2t} + ce^{3t} = 0$$
 $a + b + c = 0$
 $ae^{t} + 2be^{2t} + 3ce^{3t} = 0$ $a + 2b + 3c = 0$
 $ae^{t} + 4be^{2t} + 9ce^{3t} = 0$ $a + 4b + 9c = 0$

Basis

Example

For the subspace of all 2 x 2 matrices,

The basis is

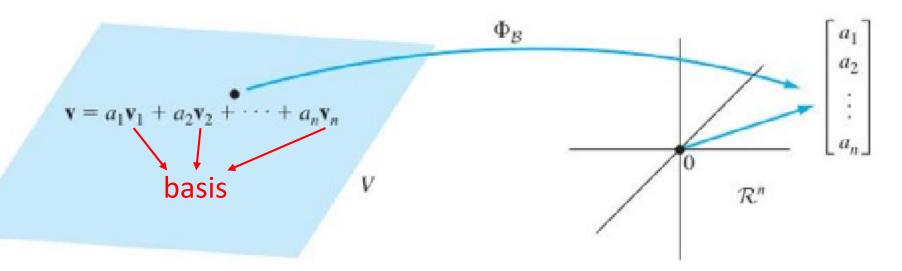

$$S = \left\{ \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 \\ 1 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 \\ 0 & 1 \end{bmatrix} \right\} \quad \text{Dim} = 4$$

Example

$$S = \{1, x, x^2, \dots, x^n, \dots\}$$
 is a basis of \mathcal{P} . Dim = inf

Vector Representation of Object

Coordinate Transformation

P_n: Basis:
$$\{1, x, x^2, \dots, x^n\}$$

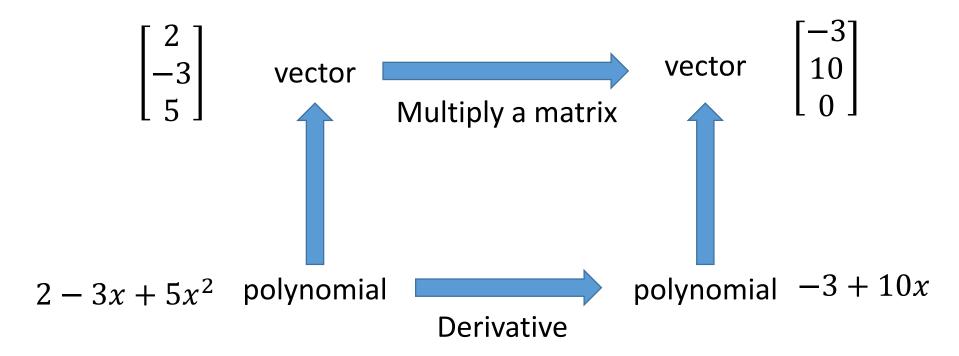

$$p(x) = a_0 + a_1 x + \dots + a_n x^n$$

$$\vdots$$

$$a_n$$

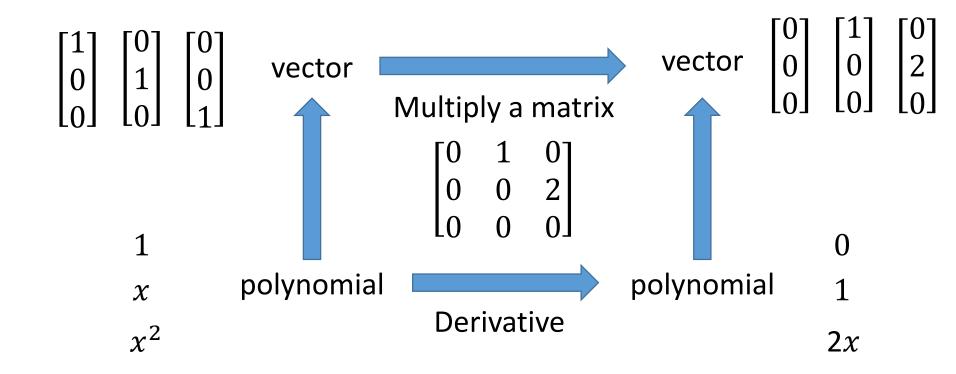

- Example:
 - D (derivative): $P_2 \rightarrow P_2$

Represent it as a matrix

- Example:
 - D (derivative): $P_2 \rightarrow P_2$

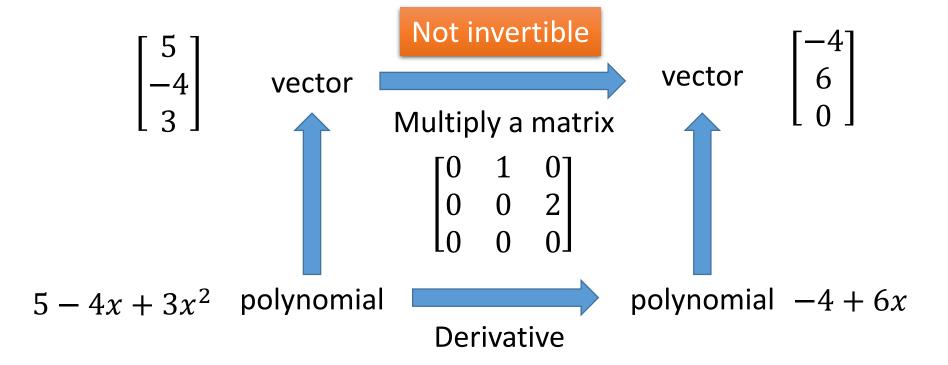

Represent it as a matrix

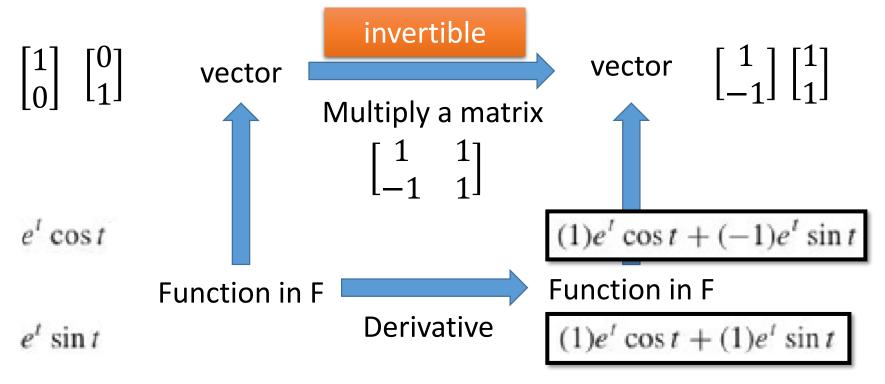

$$\begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 2 \\ 0 & 0 & 0 \end{bmatrix} \begin{bmatrix} 5 \\ -4 \\ 3 \end{bmatrix}$$

- Example:
 - D (derivative): $P_2 \rightarrow P_2$

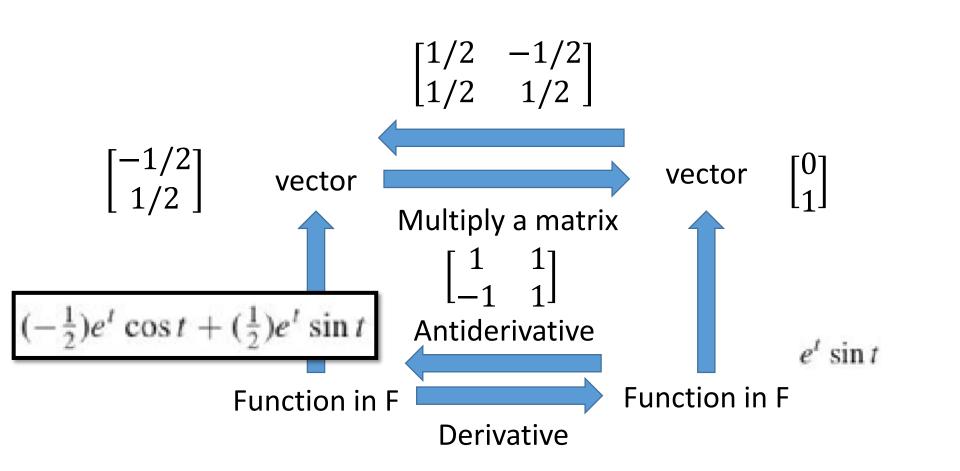

Represent it as a matrix

- Example:
 - D (derivative): Function set F → Function set F
 - Basis of F is $\{e^t \cos t, e^t \sin t\}$

Basis of F is $\{e^t \cos t, e^t \sin t\}$

Eigenvalue and Eigenvector

 $T(v) = \lambda v, v \neq 0$, v is eigenvector, λ is eigenvalue

Eigenvalue and Eigenvector

Consider derivative (linear transformation, input & output are functions)

Is $f(t) = e^{at}$ an "eigenvector"? What is the "eigenvalue"? Every scalar is an eigenvalue of derivative.

 Consider Transpose (also linear transformation, input & output are functions)

Is $\lambda=1$ an eigenvalue? Symmetric matrices form the eigenspace Is $\lambda=-1$ an eigenvalue?

Skew-symmetric matrices form the eigenspace.

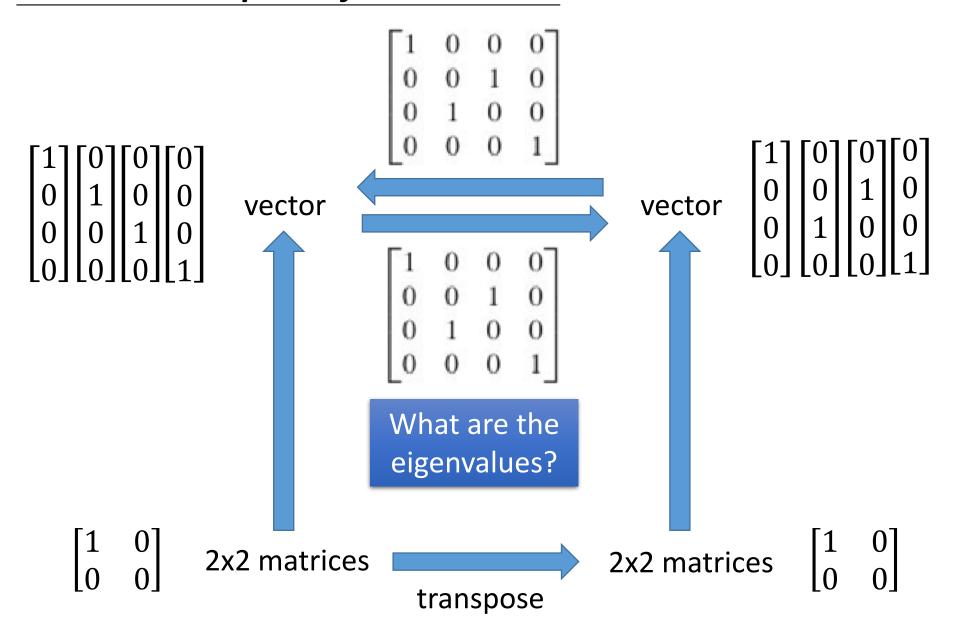

Symmetric:

$$A^T = A$$

Skew-symmetric:

$$A^T = -A$$

Consider Transpose of 2x2 matrices

Eigenvalue and Eigenvector

Consider Transpose of 2x2 matrices

Matrix representation of transpose

Γ1	0	0	0
0	0	1	0
0	1	0	0
0	0	0	1

Characteristic polynomial

$$(t-1)^3(t+1)$$

$$\lambda = 1$$

Symmetric matrices

$$\begin{bmatrix} a & b \\ b & c \end{bmatrix}$$

Dim=3

$$\lambda = -1$$

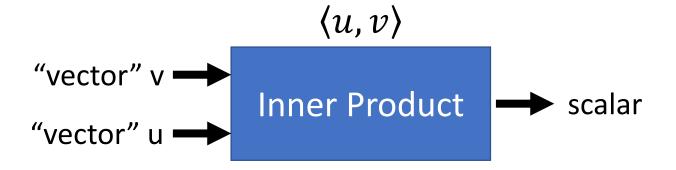

Skew-symmetric matrices

$$\begin{bmatrix} 0 & a \\ -a & 0 \end{bmatrix}$$

Dim=1

Norm (length):
$$||v|| = \sqrt{\langle v, v \rangle}$$

Orthogonal: Inner product is zero

For any vectors u, v and w, and any scalar a, the following axioms hold:

1.
$$\langle u, u \rangle > 0$$
 if $u \neq 0$

3.
$$\langle u + v, w \rangle = \langle u, w \rangle + \langle v, w \rangle$$

2.
$$\langle u, v \rangle = \langle v, u \rangle$$

4.
$$\langle au, v \rangle = a \langle u, v \rangle$$

Dot product is a special case of inner product

Can you define other inner product for normal vectors?

Inner Product of Matrix

Frobenius inner product

$$\langle A, B \rangle = trace(AB^T)$$

= $trace(BA^T)$

$$\left\langle \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}, \begin{bmatrix} 5 & 6 \\ 7 & 8 \end{bmatrix} \right\rangle = 1 \cdot 5 + 2 \cdot 6 + 3 \cdot 7 + 4 \cdot 8 = 70$$

Element-wise multiplication

$$A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix} \quad ||A|| = \sqrt{1^2 + 2^2 + 3^2 + 4^2}$$

1.
$$\langle u, u \rangle > 0$$
 if $u \neq 0$

2.
$$\langle u, v \rangle = \langle v, u \rangle$$

3.
$$\langle u + v, w \rangle = \langle u, w \rangle + \langle v, w \rangle$$

4.
$$\langle au, v \rangle = a \langle u, v \rangle$$

Inner product for general functions

$$\langle g, h \rangle = \sum_{i=-10}^{10} g(i)h(i)$$
 Can it be inner product for general functions?

general functions?

Orthogonal/Orthonormal Basis

- Let u be any vector, and w is the orthogonal projection of u on subspace W.
- Let $S = \{v_1, v_2, \dots, v_k\}$ be an orthogonal basis of W.

$$w = c_1 v_1 + c_2 v_2 + \dots + c_k v_k$$

$$\frac{u \cdot v_1}{\|v_1\|^2} \frac{u \cdot v_2}{\|v_2\|^2} \frac{u \cdot v_k}{\|v_k\|^2}$$

• Let $S = \{v_1, v_2, \dots, v_k\}$ be an orthonormal basis of W.

$$w = c_1 v_1 + c_2 v_2 + \dots + c_k v_k$$

$$u \cdot v_1 \quad u \cdot v_2 \quad u \cdot v_k$$

Orthogonal Basis

Let $\{u_1, u_2, \cdots, u_k\}$ be a basis of a subspace V. How to transform $\{u_1, u_2, \cdots, u_k\}$ into an orthogonal basis $\{v_1, v_2, \cdots, v_k\}$?

Gram-Schmidt Process

Then $\{v_1, v_2, \dots, v_k\}$ is an orthogonal basis for W

After normalization, you can get orthonormal basis.

Orthogonal/Orthonormal Basis

- Find orthogonal/orthonormal basis for P₂
 - Define an inner product of P₂ by

$$u_1, u_2, u_3$$
 $\langle f(x), g(x) \rangle = \int_{-1}^{1} f(t)g(t) dt$

• Find a basis $\{1, x, x^2\}$ v_1, v_2, v_3

$${\bf v}_1 = {\bf u}_1$$

$$\mathbf{v}_2 = \mathbf{u}_2 - \frac{\langle \mathbf{u}_2, \mathbf{v}_1 \rangle}{\|\mathbf{v}_1\|^2} \mathbf{v}$$

$$\mathbf{v}_3 = \mathbf{u}_3 - \frac{\langle \mathbf{u}_3, \mathbf{v}_1 \rangle}{\|\mathbf{v}_1\|^2} \mathbf{v}_1 - \frac{\langle \mathbf{u}_3, \mathbf{v}_2 \rangle}{\|\mathbf{v}_2\|^2} \mathbf{v}_2 = x^2 - \frac{1}{3}$$

Orthogonal/Orthonormal Basis

- Find orthogonal/orthonormal basis for P₂
 - Define an inner product of P₂ by

$$\langle f(x), g(x) \rangle = \int_{-1}^{1} f(t)g(t) dt$$

• Get an orthogonal basis {1, x, x²-1/3}

$$\|\mathbf{v}_1\| = \sqrt{\int_{-1}^1 1^2 dx} = \sqrt{2} \qquad \|\mathbf{v}_2\| = \sqrt{\int_{-1}^1 x^2 dx} = \sqrt{\frac{2}{3}}$$

$$\|\mathbf{v}_3\| = \sqrt{\int_{-1}^1 \left(x^2 - \frac{1}{3}\right)^2 dx} = \sqrt{\frac{8}{45}} \qquad \left\{ \frac{1}{\sqrt{2}}, \sqrt{\frac{3}{2}} x, \sqrt{\frac{45}{8}} \left(x^2 - \frac{1}{3}\right) \right\}$$

Orthonormal Basis

$$\left\{ \frac{1}{\sqrt{2}}, \sqrt{\frac{3}{2}} x, \sqrt{\frac{45}{8}} \left(x^2 - \frac{1}{3} \right) \right\}$$
