Singular Value Decomposition

Hung-yi Lee

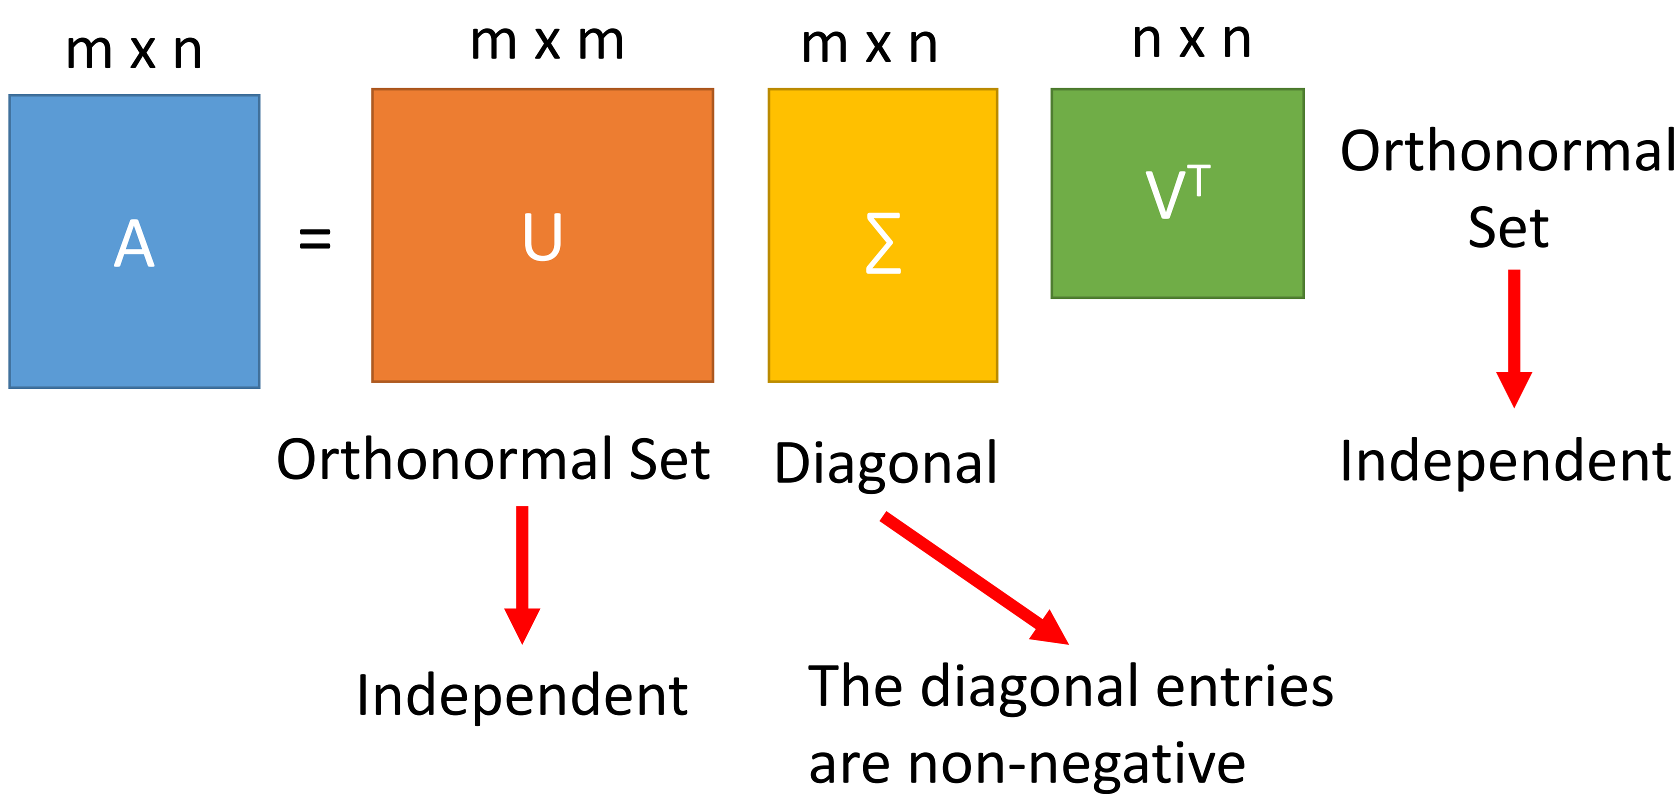
Outline

- Diagonalization can only apply on some square matrices.
- Singular value decomposition (SVD) can apply on any matrix.

- Reference: Chapter 7.7

SVD

- Any m x n matrix A



SVD

(We can exchange some rows and columns to achieve that)

$$\left[\begin{array}{cccc|cccc} \sigma_1 & 0 & \dots & 0 & 0 & 0 & \dots & 0 \\ 0 & \sigma_2 & \dots & 0 & 0 & 0 & \dots & 0 \\ \vdots & \vdots & \ddots & \vdots & \vdots & \vdots & & \vdots \\ 0 & 0 & & \sigma_k & 0 & 0 & \dots & 0 \\ \hline 0 & 0 & \dots & 0 & 0 & 0 & \dots & 0 \\ \vdots & \vdots & & \vdots & \vdots & \vdots & & \vdots \\ 0 & 0 & \dots & 0 & 0 & 0 & \dots & 0 \end{array}\right]$$

- Any m x n matrix A

m x n		m x m	m x n	n x n	
A	=	U	Σ	V^T	Independent
		Independent	Diagonal		

What is the rank of A?

If A is a m x n matrix, and B is a n x k matrix.

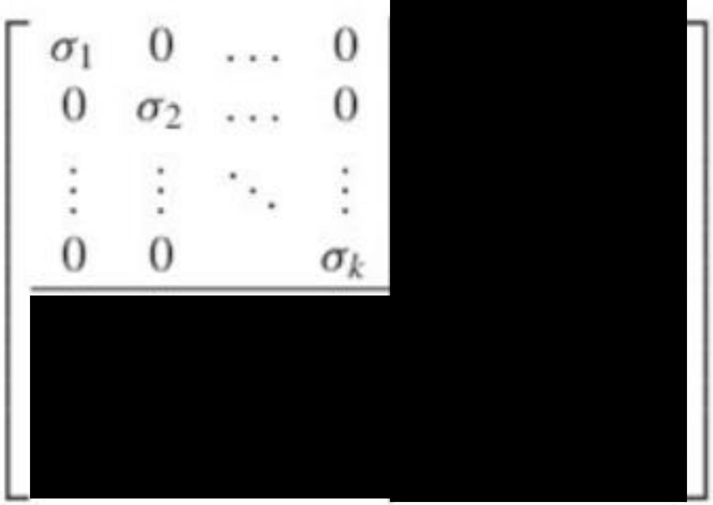
$$Rank(AB) \leq min\left(Rank(A), Rank(B)\right)$$

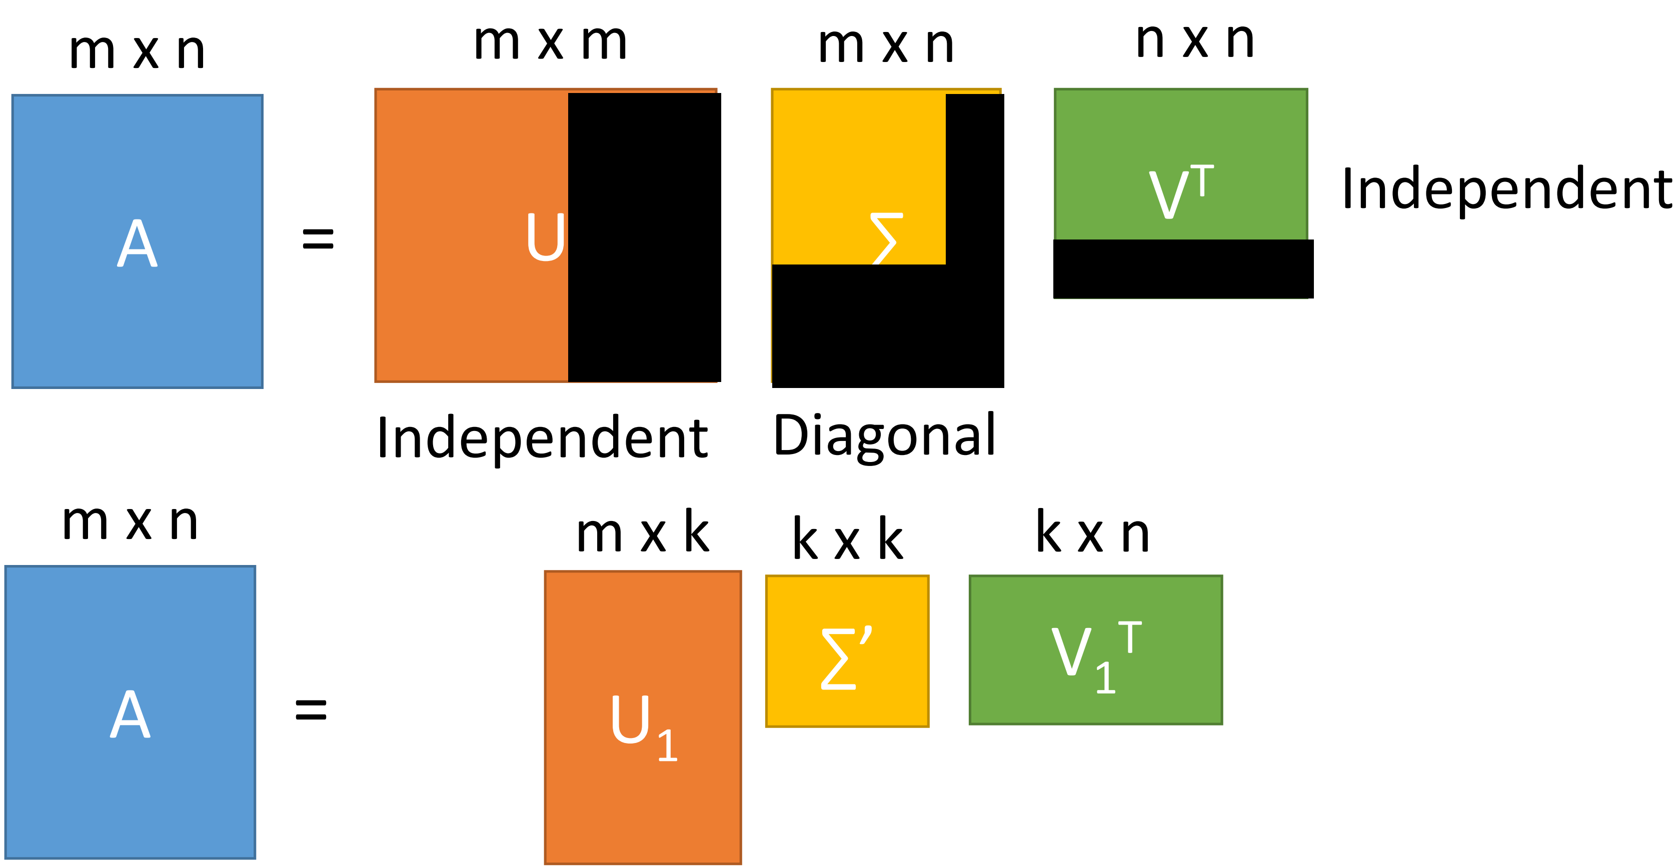
If B is a matrix of rank n, then $Rank(AB) = Rank(A)$

If A is a matrix of rank n, then $Rank(AB) = Rank(B)$

SVD

- Any m x n matrix A





SVD

$$\sigma_1 \geq \sigma_2 \geq \cdots \geq \sigma_k > 0$$

σ_k is deleted

σ_1 0 … [redacted]
0 σ_2 … [redacted]
⋮ ⋮ σ_{k-1} [redacted]

- Any m x n matrix A

m x n		m x m	m x n	n x n	
A	=	U [redacted]	Σ [redacted]	V^T [redacted]	Independent
		Independent	Diagonal		

What is the rank of A'?

k-1

m x n		m x (k-1)	(k-1) x (k-1)	(k-1) x n
A'	=	U_1	Σ'	V_1^T

A' is the rank k-1 matrix minimizing $||A - A'||$

Low rank approximation using the singular value decomposition
